

# CONTENTS

24 JULY 2025 | VOLUME 389 | ISSUE 6758

# 338

South Africa's Cradle of Humankind region hosts the world's richest hominin fossil deposits.

## EDITORIAL

### 327 Eighty years at the nuclear brink

—E. J. Moniz

## NEWS

### 328 *Science* retracts 'arsenic life' paper despite protests

Study authors and others question belated decision, whereas some critics of work are pleased —C. Offord

LETTERS p. 357

### 330 'This is delicate.' Chemically altering swamps could help curb methane emissions

Rising levels of potent greenhouse gas prompt a new kind of geoengineering —P. Voosen

### 332 All-sky radio telescopes ditch the dish

Arrays of simple antennas hunt for nearby fast radio bursts —D. Normile

### 333 Europe plans to double flagship funding scheme

Starting in 2028, the next iteration of Horizon Europe will also focus on boosting competitiveness —C. O'Grady

### 335 New scheme for overhead payments faces doubts

FAIR Model aims to head off drastic cuts in government payments, but some say it's too costly and complex —J. Mervis

### 336 'Wandering scholars' analysis reveals how location drives productivity

Concentrating funding at high-powered universities can maximize output but may sacrifice broader benefits —K. Langin

### 337 EPA begins to dismantle its research office

Extensive layoffs could have wide-ranging impacts on environmental science —E. Stokstad

## FEATURES

### 338 The riddle of coexistence

Two million years ago, three kinds of hominins walked the same valley in South Africa. Did they meet—and compete?

—A. Gibbons

PODCAST

## COMMENTARY

### POLICY FORUM

### 344 Proactive assisted gene flow for Caribbean corals in an era of rapid coral reef decline

Regulatory action could facilitate cross-border efforts to retain ecosystem function

—A. C. Baker *et al.*

### PERSPECTIVES

### 348 Harnessing insulin biology to treat diabetes and cancer

Small molecules are used to target the insulin signaling molecular machinery —G. Solinas

RESEARCH ARTICLES p. 402 & 409

### 349 Beyond the native repertoire

Design of T cell receptors by artificial intelligence is poised to accelerate cancer immunotherapy —G. H. Hickok and I. M. Stromnes

RESEARCH ARTICLES

p. 375, 380, & 386

### 351 Minuscule vibrations, uncovered

Computational imaging resolves atomic vibrations at picometer scale —T. Susi

RESEARCH ARTICLE p. 423

### 352 A catch in ocean conservation

Satellite imagery reveals global patterns of industrial fishing across marine protected areas —B. Worm

RESEARCH ARTICLES p. 392 & 396

### 354 Flat optics produces quantum graphs

A miniature device links multiple photon paths for bespoke entanglement —M. R. Shcherbakov

RESEARCH ARTICLE p. 416

## BOOKS ET AL.

**355 Stone and its stories**

A journalist pens a love letter to geologic history —R. Black

**356 Sensing early civilizations**

Armchair archaeologists summon ancient tastes, sights, and sounds to understand the past —P. E. McGovern

## LETTERS

**357 Editorial retraction**

—H. H. Thorp

NEWS STORY p. 328

**357 Weaponizing Europe's borders imperils wildlife**

—K. Nowak *et al.*

**358 Reinstate the National Climate Assessment**

—C. E. Landry *et al.*

**358 NASA Earth Science Division provides key data**

—D. B. Millet *et al.*

## REVIEWS

## REVIEW SUMMARY

**360 Agriculture**

Steering plant-soil feedback for sustainable agriculture —G. Wang *et al.*

## RESEARCH

## HIGHLIGHTS

**361** From *Science* and other journals

## RESEARCH SUMMARIES

**364 Immunology**

A human homolog of SIR2 antiphage proteins mediates immunity via the Toll-like receptor pathway —D. Bonhomme *et al.*

**365 Protein evolution**

Genetics, energetics, and allostery in proteins with randomized cores and surfaces —A. Escobedo *et al.*

**366 Molecular biology**

Expansion in situ genome sequencing links nuclear abnormalities to aberrant chromatin regulation —A. S. Labade *et al.*

**367 Leprosy**

Pre-European contact leprosy in the Americas and its current persistence —M. Lopopolo and C. Avanzi

**368 Drug development**

A neomorphic protein interface catalyzes covalent inhibition of RAS<sup>G12D</sup> aspartic acid in tumors —C. Weller *et al.*

## RESEARCH ARTICLES

**369 Marine heatwaves**

Record-breaking 2023 marine heatwaves —T. Dong *et al.*

## Protein design

**375** De novo design and structure of a peptide-centric TCR mimic binding module —K. D. Householder *et al.*

**380** De novo–designed pMHC binders facilitate T cell–mediated cytotoxicity toward cancer cells —K. H. Johansen *et al.*

**386** Design of high-specificity binders for peptide–MHC-I complexes —B. Liu *et al.*

PERSPECTIVE p. 349

## Marine protected areas

**392** Little-to-no industrial fishing occurs in fully and highly protected marine areas —J. Raynor *et al.*

**396** Global patterns and drivers of untracked industrial fishing in coastal marine protected areas —R. Seguin *et al.*

PERSPECTIVE p. 352

## Signal transduction

**402** Molecular glues that facilitate RAS binding to PI3K $\alpha$  promote glucose uptake without insulin —K. Terayama *et al.*

**409** BBO-10203 inhibits tumor growth without inducing hyperglycemia by blocking RAS-PI3K $\alpha$  interaction —D. K. Simanshu *et al.*

PERSPECTIVE p. 348

**416 Quantum metasurfaces**

Metasurface quantum graphs for generalized Hong-Ou-Mandel interference —K. M. A. Yousef *et al.*

PERSPECTIVE p. 354

**423 Phonon physics**

Atom-by-atom imaging of moiré phasons with electron ptychography —Y. Zhang *et al.*

PERSPECTIVE p. 351

## ON THE COVER

Marine protected areas (MPAs) can protect fish and maintain healthy ecosystems, such as that of the Galapagos Islands, shown here, where a sea lion hunts salem fish. As demonstrated by two related papers in this issue, however, such areas are only effective against illegal fishing when established limitations are enforced. See pages 352, 392, and 396. Photo: Enric Sala/National Geographic

## ON THE PODCAST

Robots that eat other robots, and an ancient hot spot of early human relatives

## WORKING LIFE

**430 Running out of road**

—N. Zhao

**326** *Science* Staff

**429** *Science* Careers

*Science* serves as a forum for discussion of important issues related to the advancement of science by publishing material on which a consensus has been reached as well as including the presentation of minority or conflicting points of view. Accordingly, all articles published in *Science*—including editorials, news, commentary, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by AAAS or the institutions with which the authors are affiliated. *Science* (ISSN 0036-8075) is published weekly on Thursday, except last week in December, by the American Association for the Advancement of Science, 1200 New York Avenue, NW, Washington, DC 20005. Periodicals mail postage (publication No. 484460) paid at Washington, DC, and additional mailing offices. Copyright © 2025 by the American Association for the Advancement of Science. The title *Science* is a registered trademark of the AAAS. Domestic individual membership, including subscription (12 months): \$165 (\$74 allocated to subscription). Domestic institutional subscription (51 issues): \$2865; Foreign postage extra: Air assist delivery: \$135. First class, airmail, student, and emeritus rates on request. Canadian rates with GST available upon request, GST #125488122. Publications Mail Agreement Number 1069624. Printed in the U.S.A. Change of address: Allow 4 weeks, giving old and new addresses and 8-digit account number. Postmaster: Send change of address to AAAS, P.O. Box 96178, Washington, DC 20090–6178. Single-copy sales: \$15 each plus shipping and handling available from backissues.science.org; bulk rate on request. Authorization to reproduce material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act can be obtained through the Copyright Clearance Center (CCC), www.copyright.com. The identification code for *Science* is 0036-8075. *Science* is indexed in the *Reader's Guide to Periodical Literature* and in several specialized indexes.
