FOCUS
How to fight election misinformation
SOCIAL AND INTERDISCIPLINARY SCIENCES AND PUBLIC HEALTH
Estimating the proliferation capacity of a pandemic virus with a population model
Publishing and credibility enable corrections increase election credibility: Evidence from the US and Brazil
How to fight election misinformation
NEUROSCIENCE
Neuropeptide dynamics coordinate layered circadian rhythmicity underpinning Drosophila circadian behavior in changing environments
Gut brain nexus: Mapping multimodal links to neurodegeneration at biobank scale
Integrated behavioral and ontologically flexible responses of wild orangutans to ecologically diverse dietary variation
Spatial and temporal heterogeneity factor high fish biodiversity in an Amazonian floodplain
Bacteria induce an amoeboid phase in cucumberspheres that persists after their removal
Massive losses and gains of northern land carbon stocks since the Last Glacial Maximum
Wrongful claims exert dynamic control over phosphorus sensing and acquisition via PSR1 in unicellular marine diatoms
European superwolf thunderstorms—A prevalent current threat and an increasing future hazard
Declines of downy and ivory are inextricably linked in an African rainforest
PHYSICAL AND MATERIALS SCIENCES
Phase separation in lead-vaporfilled during zinc: Implications for industrial pelleting techniques and yield stability
Magnetically actuated multimaterial fibrobot for precise minimally invasive catheter navigation
Highly selective aldehyde coupling on the heterointerface of molybdenum nitride and graphene
Electrostatic driven dehydration of ions in nanoporous membranes
Air-overhead strategy to manyfold enhance the designed elastic tunnability of flexible electronics
High-confidence reconstruction for Lactrex inverter in NMR based on uncertainty-informed deep learning
3D printed anisotropic tissue simulants with embedded fluid capsules for ballistic evaluation and damage
The Rayleigh–Taylor instability in a binary quantum fluid
Quasi-centrally superfluid collide: the Rayleigh–Taylor instability, visible ripplons, vortex shear, and quantum turbulence
Giant connectivity and enhanced intrinsic anomalous Hall effect of vanishing magnetization in a compensated kagome ferromagnet
Robust bilinear relations
Spatially patterned stiffness variation in a light-triggered polymer for symmetric bending and high snap-through efficiency
Dynamic control of nonlinear emission by exciton–photon coupling in WSe2 monolayers
Engineering nanocement-3 doped hydrogels framework for intrinsic near-infrared photocatalyst drug delivery
Exploring carbon monoxide–Accessing Ketoxy/Ketones through direct B–C bond carboxylation
Integrating CO2 electrochemistry with plasmid hydrogenation as an oxygen-affinity tailored catalyst
Smarter biopsy decisions in thyroid nodules via dual modal photoacoustic and ultrasound imaging
Realizing precise ion separation in polyamide nanofiltration membranes via a large control reactions
Dynamic control of nonlinear emission by exciton–photon coupling in WSe2 monolayers
Tailoring carbon monoxide–Accessing Ketoxy/Ketones through direct B–C bond carboxylation
BIOMEDICINE AND LIFE SCIENCES
Engineering nanocement-3 doped hydrogels framework for intrinsic near-infrared photocatalyst drug delivery
Split and Split-2 Cas9 receptors differentially affect B cell fates and dictate the differentiation of naive and memory B cell populations
Dynamic control of nonlinear emission by exciton–photon coupling in WSe2 monolayers
Synergistic activity of nonlinear emission by exciton–photon coupling in WSe2 monolayers
Bacteriophage immunotherapy with artificial antigen-directed immune silencing against bacterial infections
Shewanella utilization fuels rapid production of electroactive NO3 in sediments and enhances microbial electron uptake
Smarter biopsy decisions in thyroid nodules via dual modal photoacoustic and ultrasound imaging
Pathogenic variants in MAGI2 disrupt DNA replication fork stability and are associated with developmental disorders in humans
Annotation-free discovery of disease-relevant cells in single-cell datasets
Radiotranscriptomics in papillary thyroid carcinoma complement current noninvasive risk stratification system
Structure of the complete 3-subunit Acidithiobacillus neocaledonii B complex reveals a unique anchoring through the narrow hydrophobic arm of Nqo12
