254

EDITORIAL

251 To reverse nature loss, change what drives it
—D. Cooper and S. Díaz

NEWS

252 November elections may bring little relief for scientists beleaguered by Trump
If Democrats win one or both chambers of Congress, investigations are likely, but meaningful change may be elusive —J. Mervis and J. Kaiser

254 AI takes a bite out of math's hardest problem
A trove of AI papers includes progress on the Riemann hypothesis, a famous puzzle about prime numbers
—Z. Savitsky

255 OpenAI just changed math forever. Exactly how, no one yet knows
After massive dump of AI-generated solutions to nearly 400 problems, mathematicians wonder: Has their field been decimated or invigorated?
—T. Howarth

257 'Super' El Niño spurs research on ecosystem impacts
This year's event could shed light on how the natural world may respond to climate change in the decades ahead —W. Cornwall

258 NIH revives network to study emerging diseases—but its new restrictions baffle scientists
Ban on hunting for new viruses in wildlife is at odds with program's mission, researchers say
—J. Cohen

260 New tools may help decide who needs antidepressants
Amid a U.S. push for "deprescribing," researchers are finding ways to match patients to their optimal treatment —S. Reardon

FEATURES

262 Redating the Inca empire
The traditional Inca chronology has collapsed. New radiocarbon dates show the empire lasted longer than was previously thought—and met more resistance —L. Wade PODCAST

COMMENTARY

PERSPECTIVES

268 How plants decode immunogenic glycans
Distinct recognition systems for specific sugars ensure appropriate immune or maintenance responses
—L. Zhang and T. Nürnberger
RESEARCH SUMMARY p. 290; RESEARCH ARTICLES pp. 291 & 298

270 Winds make bird flights cheaper
Many birds use atmospheric air currents to reduce the energy costs of flying —A. Hedenström
RESEARCH ARTICLE p. 347

272 Writing electronic phases into atomic layers
An atomically thin material converts into crystals with different electronic properties
—H.-Y. Choi and G.-H. Lee
RESEARCH ARTICLE p. 340

273 Keeping time in the crypt
Oscillating signal dynamics confer robust intestinal health
—S. J. Ellis
RESEARCH SUMMARY p. 289

ILLUSTRATION: ADRIÀ VOLTÀ

Revised estimates suggest that flying, especially soaring, as practiced by species such as these Andean condors, can be less energetically costly than swimming.

POLICY FORUM

275 Market dilution, fair use, and generative AI
Market dilution theory, which could affect AI use in science, requires conceptual clarity and empirical evidence —P. Samuelson *et al.*

BOOKS ET AL.

278 An elegy for the unsung world-builders
Plants and animals have always been critical to humanity's success, and we ignore their contributions at our peril —M. E. Hannibal

279 Fear the bioengineered future
Advanced technologies meet humanity's worst impulses in a fast-paced new film —G. J. Miller

LETTERS

280 China's pollination policy must look beyond managed honey bees —Z. Zhang

281 Prioritize contaminants of emerging concern in the High Seas Treaty —C. Xie and X. Liu

282 Make plastics an explicit consideration in the High Seas Treaty —P. Banik *et al.*

RESEARCH

HIGHLIGHTS

283 From *Science* and other journals

RESEARCH SUMMARIES

286 Plant biology
Regulation of target gene expression by chromatin-associated protein-coding transcripts in plants —L. Han *et al.*

287 Neuroscience
Dendritic computation for abstract rule-based flexible decision-making —Y. Zhang *et al.*

288 Cell biology
In situ structure of the human ciliary transition zone links linker defects to primary ciliary dyskinesia —H. Zhou *et al.*

289 Signal transduction
Frequency encoding regulates cell type composition in the small intestine —S. D. C. Weterings *et al.*
PERSPECTIVE p. 273

290 Plant immunity
Glycan recognition by a plant damage-sensing immune receptor —P. Jiménez-Sandoval *et al.*
PERSPECTIVE p. 268; RESEARCH ARTICLES pp. 291 & 298

RESEARCH ARTICLES

Plant immunity

291 A pair of chitosan receptors confer broad-spectrum fungal resistance —K. Huang *et al.*

298 Structural basis for size-selective perception of chitin in plants —K. Gysel *et al.*
PERSPECTIVE p. 268; RESEARCH SUMMARY p. 290

306 Metallurgy
Engineering ordered two-dimensional defect phases to strengthen structural alloys —A. Bezold *et al.*

311 Ice sheets
Empirical constraints on ice cliff calving —C. Needell *et al.*

316 2D materials
Gate-tunable chiral spin mode in WSe_2/WS_2 moiré superlattices —Z. Shan *et al.*

321 Quantum systems
Deterministic generation and distribution of genuine multipartite entanglement in macroscopic acoustic resonators —D. Tan *et al.*

326 Plasmonics
Electrically driven chiral emission from plasmonic tunnel junctions —Y. Xie *et al.*

331 Organic chemistry
Stereoselective polysubstituted bicyclo[1.1.0]butane synthesis by rhodium-catalyzed kinetic resolution —X. Zhang *et al.*

340 Semiconductors
Modular van der Waals MOSFETs through layer-by-layer chalcogen substitutions —S. Y. Min *et al.* PERSPECTIVE p. 272

ON THE COVER

New radiocarbon dating efforts are rewriting a long-accepted timeline for many sites along the Qhapaq Ñan, an ancient road system, pictured here, that was built through the Andes by the Inca empire. The revised timing reveals hints of local resistance to the empire's expansion during the 15th century. See page 262. Photo: José Luis Matos Muñasqui, Archivo del Proyecto Qhapaq Ñan–Sede Nacional del Ministerio de Cultura del Perú

347 Comparative physiology
Airflows redefine the cost of aerial transport in the wild —M. Scacco *et al.*
PERSPECTIVE p. 270

WORKING LIFE

354 Speaking with authority
—L. Nguyen Chaplin

353 *Science* Careers
