CONTENTS

22 OCTOBER 2026 | VOLUME 394 | ISSUE 6822

381 & 455

The edge of the Barnes Ice Cap, Baffin Island, Canada, and its position of maximum extent around 1960

EDITORIAL

363 The AI debate is missing half the system
—P. Michelucchi

NEWS

364 Vaccine trial is a ray of hope in Congo's Ebola epidemic
Study will first test "mismatched" vaccine but Bundibugyo-specific shots may be added soon
—K. Kupferschmidt

366 Across fields, AI finds solutions hiding in plain sight
"BootLoops" software enabled researchers to quickly find and attack problems in 22 disciplines
—C. Zhao

367 How the domestication of a killer bacterium led to Botox
Scientists inadvertently turned *C. botulinum* into a tool for medicine and the beauty industry, study finds —J. Cohen

368 Microwave observatory peers into the infant universe
In Chile, Simons Observatory begins hunt for galaxy clusters and signs of cosmic inflation —D. Clery

370 Deep-sea life is still reeling from the BP oil spill
A 13-year study shows Gulf of Mexico ecosystems still haven't recovered
—E. Stokstad

371 Iron at Earth's heart may take a surprising form
X-ray experiments reveal cubic crystals that could complicate the picture of the inner core
—P. Voosen

372 Fired biologist wins $6 million in defamation lawsuit
A jury ruled in favor of David Sabatini, dismissing accuser's claims of sexual harassment, retaliation —P. Jacobs

FEATURES

374 Eyes on the ball
A "robo ump" that calls balls and strikes in Major League Baseball makes its World Series debut this week. It has to be near-perfect
—J. Cohen

378 The instigator
A single FBI agent spurred NIH's campaign against foreign intervention on U.S. campuses. Now, he's studying the extent of the problem —J. Mervis

COMMENTARY

PERSPECTIVES

381 Has the next ice age already come and gone?
The last remnant of a continental glacier shows that global warming may have forestalled the next glaciation —S. A. Marcott
RESEARCH ARTICLE p. 455

382 Putting glucose metabolism under electronic control
An electronic device controls the redox mechanisms that regulate glucose concentrations in mice —W. E. Bentley and G. F. Payne
RESEARCH SUMMARY p. 400

383 A cell death ballet in two acts
Two proteins that permeabilize mitochondria promote cell death through distinct mechanisms
—C. Muñoz-Pinedo and S. J. Martin
RESEARCH SUMMARY p. 401

PHOTOS: NICOLÁS YOUNG

385 The cognitive power of the avian brain
Carrion crows make decisions faster than monkeys and humans
—M. Colombo and O. Poutrain-Sorel
RESEARCH ARTICLE p. 445

BOOKS ET AL.

386 The microscope and the metaphor
Science shows us what to do to save the planet—poetry helps us undertand why we should
—P. Levin and D. Hassler PODCAST

387 The Monarch Bear
—L. Volski

LETTERS

388 Indigenous higher education needs support
—B. E. Soares *et al.*

389 India needs a tree conservation plan —A. Dhyani

389 AI biosecurity must include agriculture
—J. Feldman *et al.*

ANALYSIS

POLICY ARTICLE

390 Fiscal discipline without physical resilience
Reforms could shift fiscal discipline and resilience investment into reinforcing forces rather than competing ones
—A.Mishra *et al.*

RESEARCH

HIGHLIGHTS

394 From *Science* and other journals

RESEARCH SUMMARIES

397 Cancer
Intron retention regulates STAT2 function and associates with immunotherapy response in lung cancer —R. P. Englander *et al.*

398 Solar cells
Decoupled self-assembled monolayer and perovskite deposition for efficient flexible solar modules —Y. Wu *et al.*

399 Artificial intelligence
The Virtual Biotech: A multi-agent AI framework for therapeutic discovery and development —H. G. Zhang *et al.*

400 Metabolism
Wireless electrocatalytic closed-loop system for drug-free management of diabesity —D. Maity *et al.*
PERSPECTIVE p. 382

401 Cell biology
BAK and BAX form a multiprotein complex to drive mtDNA efflux and caspase-independent cell death
—S. Yang *et al.*
PERSPECTIVE p. 383

RESEARCH ARTICLES

402 Molecular biology
Noncoding transcription controls the developmental dynamics of long-range gene regulation
—P. J. Batut *et al.*

408 Conservation biology
Safeguarding global terrestrial vertebrate species from future sea level rise
—Z.-W. Jiang *et al.*

413 Natural products
Natural product biosynthesis by guanidine prenyltransferases in plants and bacteria
—D. Kolling *et al.*

419 Solid-state physics
Thermodynamic origin of the phonon Hall effect in a honeycomb antiferromagnet
—Q. Meng *et al.*

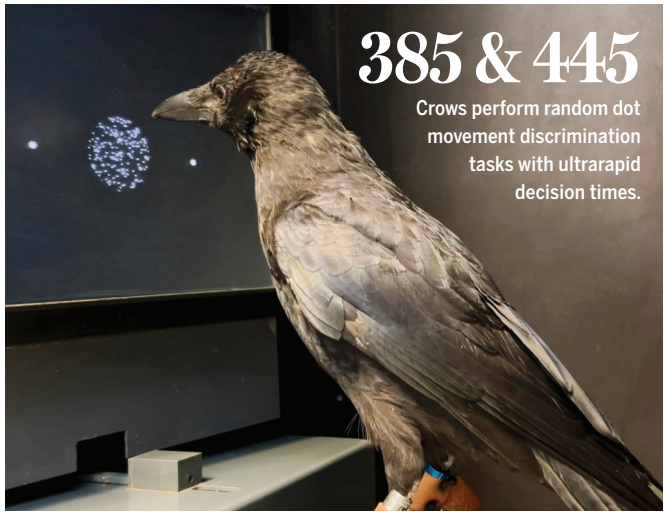

423 Machine learning
Sequential diagnosis with language models —H. Nori *et al.*

429 Physics
Electronic bound states in the continuum in a two-dimensional metal —M. Thinel *et al.*

434 Membranes
Dynamic functionality–enabled fast and selective transport in nanochannels —H. Zhang *et al.*

440 2D materials
Visualizing symmetry-broken Chern insulators and their quantum melting —M. He *et al.*

445 Comparative cognition
Ultrarapid decision-making in an avian brain
—P. Schmidbauer and A. Nieder
PERSPECTIVE p. 385; PODCAST

385 & 445
Crows perform random dot movement discrimination tasks with ultrarapid decision times.

ON THE COVER

This image depicts a patient and a physician working together with artificial intelligence (AI) to reach a diagnosis. Researchers developed an AI-based approach to help physicians with real-life clinical workups, starting with the patient's chief complaint, systematically asking questions and deciding what laboratory and imaging tests to order, and then continuing the evaluation on the basis of the answers received.
See page 423.
Illustration: Jason Solo

450 2D materials
Imaging electron-hole asymmetry in the quantum melting of generalized Wigner crystals —E. Berger *et al.*

455 Glacial inception
Late Holocene reexpansion of the Laurentide Ice Sheet
—N. E. Young *et al.*
PERSPECTIVE p. 381

WORKING LIFE

462 My hidden homeless past
—S. Raymond

362 *Science* Staff
460 *Science* Careers

Science **serves as a forum for discussion of important issues related to the advancement of science by publishing material on which a consensus has been reached as well as including the presentation of minority or conflicting points of view. Accordingly, all articles published in *Science*—including editorials, news, commentary, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by AAAS or the institutions with which the authors are affiliated.** *Science* (ISSN 0036-8075) is published weekly on Thursday, except last week in December, by the American Association for the Advancement of Science, 1200 New York Avenue, NW, Washington, DC 20005. Periodicals mail postage (publication No. 484460) paid at Washington, DC, and additional mailing offices. Copyright © 2026 by the American Association for the Advancement of Science. The title *Science* is a registered trademark of the AAAS. Domestic individual membership, including subscription (12 months): $165 ($74 allocated to subscription). Domestic institutional subscription (51 issues): $3125; Foreign postage extra: Air assist delivery: $135. First class, airmail, student, and emeritus rates on request. Canadian rates with GST available upon request, GST #125488122. Publications Mail Agreement Number 1069624. **Printed in the U.S.A. Change of address:** Allow 4 weeks, giving old and new addresses and 8-digit account number. **Postmaster:** Send change of address to AAAS, P.O. Box 96178, Washington, DC 20090–6178. **Single-copy sales:** $15 each plus shipping and handling available from backissues.sciencemag.org; bulk rate on request. **Authorization to reproduce** material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act can be obtained through the Copyright Clearance Center (CCC), www.copyright.com.
